ANALYTICAL PROFESSIONAL BALANCE

Models AFP 110 G, 210 g, 360 G, 720 g

A large LCD display and sealed keypad with positive “click” feel make the AFP easy to use. The dual “TARE” keys at either end of the keypad (the ones that are used most in laboratory weighing) are highlighted in yellow for quick recognition.

The GLP compliant software package lets the user print out and record details of the calibration, providing documentation to mark the audit trail.

For working in an unstable environment, digital filters and suppression of the last digit on the display optimise response time and speed up weighing operations.

The balance can be set to weigh in a choice of weighing units.

For density/specific gravity determination the AFP can be supplied with internal software for use in conjunction with the AdamLab Density Determination Kit, taking you step by step through the weighing process, calculating the density and displaying the result on the LCD. (For use with the 1mg models only).

The AFP L is the basic version of the balance with external calibration only. However, the balances are also available with motorised internal calibration as models AFP LC.

For details of capacities on models available, refer to the following page.
