CHIPMUNK & BADGER JAW CRUSHERS

**Chipmunk
Jaw Crusher**

The Chipmunk and Badger Jaw Crushers are capable of reducing friable material, including ore, minerals and chemicals to 1/16". They feature a rugged construction, are designed to absorb shock and impact in constant use applications. All parts are easily accessible. Maintenance is easily accomplished and cleanup is relatively simple and quick. Standard jaw and cheek plates are abrasion resistant steel, however manganese steel plates are optionally available. The discharge opening can be easily adjusted by a handwheel, to easily select the desired product particle size. A feed hopper is included with each crusher, as are flywheel and belt guards.

Badger 5 X 7

The Badger has a 5" x 7" jaw opening, with a capacity of reducing 4" x 6" quartz particles to -1/4" at a rate of 1,300 pounds per hour. This large capacity laboratory jaw crusher features a small 'footprint' design, with an overhead mounted motor to conserve lab space.

Features of this crusher are a heavy duty fabricated steel frame, heavy duty, heat treated reversible jaw and cheek plates, heavy duty spherical roller bearings, easy handwheel jaw adjustment, and all Badger crushers are furnished with motor and starter. A feed hopper is included with each crusher, as are flywheel and belt guards.

Catalog Number	Description	Capacity (Lbs./Hr.)	HP	Jaw Opening	Reduction Size		Weight Lbs (Kg)
					MIN	MAX	
010A-030	Badger, 5X7	1,300	5	5" x 7"	1/16"	3/4"	750 (340)
010A-004	Chipmunk, WD	800	3	2-3/8"x4"	1/16"	5/8"	595 (270)
010A-002	Chipmunk, VD	400	2	2-1/4"x3"	1/16"	3/8"	380 (173)

All crushers are furnished with v-belt drives and guards.
 Standard electrical requirements are 220V, 380V, 440V/3 Ph/50 or 60 Hz.
 Single phase motors are also available.
